

*“Ice cream. . . . cold drinks,
get them here!”*

Mobilux

*The Elcold
battery box is
easy to transport.*

In order to be able to sell chilled goods at the spot where the customers need them most, an independent power source is required.

The Elcold battery box has been specially designed for mobile use on the beach and other places far from the nearest power point.

Practical trials have shown that the Elcold battery box can keep the goods frozen for at least 8 hours. And after a good day's selling, it can be recharged over night ready for the next day.

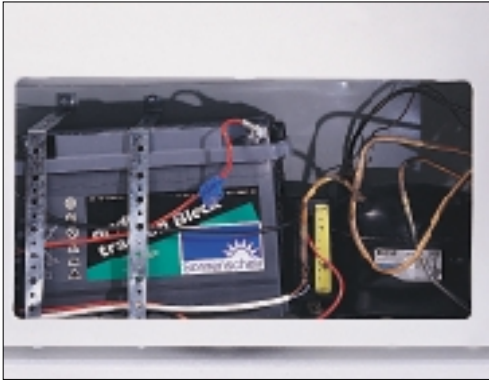

The battery box is deliberately designed to be as compact as possible and this model weighs only 40 kg. It is so light that it can even be transported on a cart or a tricycle. The tricycle is also available from Elcold.

Elcold can customise your battery box to help promote your products to the customer.

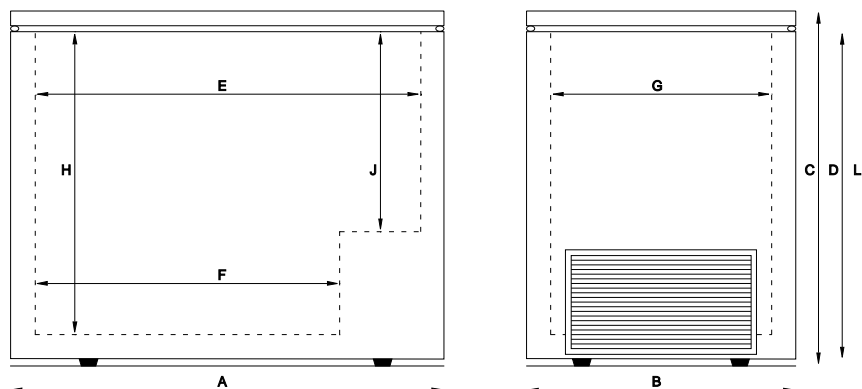

Sales inspiration

Elcold's mobile battery box is already widely used on beaches around the world, where it is used to bring refreshing chilled products to the customer.

The battery is installed in the compressor compartment, taking up as little room as possible.
